## **VISITING SCHOLAR POSITION**

### ***Visiting Research Scholar in Dementia Knowledge Translation***

The Education and Training theme of The Canadian Dementia Knowledge Translation Network (CDKTN) project at UBC is seeking Visiting Scholars whose interests lie at the intersection of dementia and knowledge translation. The program funds 2-6 month fellowships for investigators, academic faculty and clinicians to conduct research, deliver other scholarly products such as case reviews and books, or produce innovative multimedia materials in dementia or knowledge translation research in Canada. This is an outstanding opportunity to participate in world class research in dementia KT and interact with high calibre scholars at the Neuroethics Core & the UBC Hospital Clinic for Alzheimer Disease and Related Disorders.

Applicants for these competitive fellowships must hold an MD and/or PhD degree. Scholars selected for the Vancouver-based program will receive both travel support and a monthly stipend. Openings are currently available and applications will be reviewed upon receipt.

To apply, please submit a short statement describing your interest in the scholarship and proposed project, a cover letter and CV c/o Janice Matautia: [matautia@mail.ubc.ca](mailto:matautia@mail.ubc.ca)
